

BONNY MAKANIANKHONDO

Full Stack Software Engineer

Chicago, IL • 312-966-9631 • bmakianiankhondo@icstars.org • linkedin.com/in/bonnymak • github.com/bonny2long

SUMMARY

Full stack software engineer focused on building structured, reliable systems across frontend, backend, and data layers. Background in industrial infrastructure informs a disciplined approach to system design, security, and performance. Experienced in AI-driven applications, scalable APIs, and relational data systems. Versatile across the stack and comfortable moving between product, backend logic, and data systems to deliver complete solutions.

TECHNICAL SKILLS

Languages:	TypeScript, JavaScript (ES6+), Python, SQL
Frontend:	React, Next.js, Tailwind CSS
Backend & APIs:	Node.js, Express, Fastify, REST APIs, GraphQL, JWT, OAuth
Data Systems:	PostgreSQL, MySQL, Prisma, relational schema design, indexing, query optimization
AI & Automation:	LLM APIs, prompt engineering, RAG pipelines, semantic search (pgvector)
Infrastructure:	Docker, AWS, GitHub Actions, CI/CD, Git

EXPERIENCE

Full Stack Engineering Intern

i.c.stars — Chicago, IL | Aug 2025 – Dec 2025

- Delivered a full stack customer insights dashboard selected by United Airlines in a competitive RFP
- Built an AI insight layer using Anthropic Claude to generate structured, executive-ready recommendations
- Implemented role-based access control (RBAC) to support secure, persona-specific data access
- Reduced analysis time by 70% through improved data visibility and automation

PROJECTS

Time Ledger — Time Tracking and Billing Platform

Personal Project | timeledger.netlify.app

- Built a full stack SaaS application for time tracking, client management, and billing workflows
- Designed relational data model supporting clients, projects, time entries, and invoice summaries
- Developed frontend using React, TypeScript, and TanStack Query for state and data synchronization
- Built backend with FastAPI, SQLAlchemy, and Postgres for structured API and data handling
- Implemented authentication and multi-user workflows using Supabase Auth
- Deployed production system using Netlify (frontend) and Railway (API)
- Currently used by i.c.stars participants for real client contract work

Resume Agent — AI Application Automation Platform

Personal Project | Jan 2026 – Present

- Architected a multi-agent system to automate job analysis, resume generation, and application workflows
- Implemented semantic matching using PostgreSQL (pgvector) to compare experience with job requirements
- Designed an ATS scoring system using structured rules and similarity ranking
- Integrated multiple LLM providers with fallback logic for reliability
- Reduced manual resume tailoring time by 80%

SyncUp — Mentorship and Collaboration Platform

Co-Founder | Sep 2025 – Present

- Building a scalable platform designed to support structured skill tracking and collaboration

- Designed relational schema in MySQL to model user progression and skill signals
- Developed REST APIs with Node.js and Express
- Built responsive frontend using React and Tailwind CSS

Chef BonBon — AI Recipe Platform

Personal Project | May 2025 – Jul 2025

- Built AI-powered recipe generation using React, Node.js, and LLM integration
- Migrated backend from Firebase to PostgreSQL to improve scalability and data integrity
- Implemented row-level security (RLS) to enforce data isolation
- Designed API flow from user input to AI-generated output

PRIOR EXPERIENCE

Heat & Frost Insulator	2018 – 2023
Union Local 75 — South Bend, IN	
Electrical Technician	2016 – 2018
Alexander Dennis Inc — Nappanee, IN	

EDUCATION

A.A.S. in Construction Management
Ivy Tech Community College
