

BONNY MAKANIANKHONDO

Full Stack Software Engineer | AI-Enabled Product Builder | Systems-Minded Developer

Chicago, IL | 312-966-9631 | bmakaniankhondo@icstars.org | bonnymak.tech | linkedin.com/in/bonnymak | github.com/bonny2long

SUMMARY

Full stack software engineer focused on building reliable applications across frontend, backend, data, and AI-enabled workflows. Experienced with React, Next.js, TypeScript, Node.js, FastAPI, PostgreSQL, Supabase, and LLM integrations. I bring a systems-minded approach shaped by prior industrial infrastructure work, translating business needs into structured products with clear APIs, secure data access, and maintainable architecture.

TECHNICAL SKILLS

Languages & Core: TypeScript, JavaScript (ES6+), Python, SQL

Frontend: React, Next.js, Vite, Tailwind CSS, React Router, TanStack Query, Recharts, responsive UI

Backend, APIs & Auth: Node.js, Express, Fastify, FastAPI, REST APIs, GraphQL, JWT, OAuth, RBAC, Supabase Auth

Data, AI & Infrastructure: PostgreSQL, MySQL, Prisma, SQLAlchemy, Alembic, pgvector, RAG, LLM APIs, Docker, AWS, Railway, Netlify, GitHub Actions, CI/CD, Git

EXPERIENCE

Full Stack Engineering Intern | i.c.stars

Aug 2025 - Dec 2025

Chicago, IL | Client-facing engineering, leadership, and consulting internship

- Co-delivered a winning customer insights dashboard selected by United Airlines in a competitive RFP, working under client-facing deadlines with a cross-functional team.
- Translated stakeholder needs into dashboard requirements, KPI layouts, data visibility rules, and presentation-ready reporting flows.
- Built dashboard features across frontend, backend, database, and AI-supported insight workflows for executive and analyst use cases.
- Engineered an AI insight layer using Anthropic Claude API to generate structured recommendations from customer feedback data.
- Implemented role-based access control to support secure, persona-specific access; contributed debugging, documentation, demos, and delivery planning.

Independent Full Stack Engineer | Product & Operational Software Projects

2025 - Present

Portfolio products, freelance-style builds, and production workflow systems

- Build practical software for time tracking, billing, mentorship operations, team coordination, inventory-style tracking, and small business workflows.
- Design relational data models, API flows, dashboards, and workflow logic around clients, projects, roles, approvals, activity records, and reporting.
- Create technical documentation, architecture notes, implementation plans, and handoff explanations to support maintainability and product iteration.

SELECTED PROJECTS

Time Ledger | Time Tracking and Billing Platform

timeledger.netlify.app

React 19, TypeScript, Vite, FastAPI, SQLAlchemy, PostgreSQL, Supabase Auth, TanStack Query, Railway, Netlify

- Built a production full stack SaaS application for team time tracking, client management, weekly review, and client-ready billing summaries.
- Designed relational models for workspaces, team members, clients, projects, time entries, archive states, and reporting views.
- Implemented authenticated multi-user workflows, invite/onboarding flows, drawer-based time-entry editing, billing text generation, and operational insights.
- Used by i.c.stars participants to track real contract work and reduce unclear manual time reporting.

ICAA Headquarters / SyncUp | Community Operations Platform

github.com/bonny2long/SyncUp

React, Tailwind CSS, Node.js, Express, MySQL/Supabase Postgres direction, auth middleware, role-based workflows

- Building a centralized platform for alumni, residents, mentors, administrators, projects, bookings, collaboration, and community operations.
- Refined role semantics, onboarding flows, protected routes, admin dashboard behavior, SMTP-ready verification flow, and production launch planning.
- Designed dashboard modules and relational workflows to support member directories, mentorship coordination, public projects, and governance responsibilities.

Resume Agent | AI Application Automation Platform

github.com/bonny2long/resume-agent

Python, PostgreSQL, pgvector, LLM APIs, semantic matching, structured scoring, document generation

- Architected an AI-assisted system that analyzes job descriptions, compares role requirements to structured experience data, and generates tailored application materials.
- Implemented semantic matching with pgvector, structured ATS scoring, keyword classification, and multi-provider LLM fallback logic.
- Reduced manual resume tailoring time by roughly 80% while improving consistency, structure, and job-to-resume alignment.

Chef BonBon | AI Recipe Platform

github.com/bonny2long/ChefBonBon

React, Node.js, Express, PostgreSQL/Supabase, LLM API integration, rate limiting, CORS configuration

- Built an AI recipe-generation app that transforms user ingredients and cooking method choices into structured recipe suggestions.

- Migrated backend direction from Firebase-style storage to PostgreSQL/Supabase patterns to improve scalability, data isolation, and long-term maintainability.

PRIOR EXPERIENCE

Heat & Frost Insulator | Union Local 75 **2018 - 2023**

South Bend, IN

- Worked in industrial environments requiring safety discipline, technical precision, planning, documentation, and reliable execution under field constraints.

Electrical Technician | Alexander Dennis Inc. **2016 - 2018**

Nappanee, IN

- Supported electrical assembly and troubleshooting work, building practical experience with systems thinking, diagnostics, and quality control.

EDUCATION

A.A.S. in Construction Management | Ivy Tech Community College
